

THE WHITNEY SANCTUARY

2026 Infrastructure Integrity Report

7810 Stonehaven Drive | Waxhaw, NC 28173

Offered at \$2,195,000 | 1.26-Acre Two-Parcel Compound

Zero-Capital-Expenditure Certification

This report documents the systematic elimination of deferred capital expenditure across all major mechanical, structural, and environmental systems at 7810 Stonehaven Drive. Every renewal detailed herein was completed in 2025–2026 under professional oversight, delivering a maintenance-free infrastructure runway of 15+ years.

Prepared March 2026 | Principal-Led Documentation

The Invisible Debt Thesis

In the 2026 Weddington Chase and broader Waxhaw/Marvin luxury corridor, a typical un-renovated 2002-era estate carries a quantified “Invisible Debt” of **\$120,000 to \$180,000**. This figure represents the near-term replacement cost of aging mechanical systems, roofing, drainage infrastructure, and environmental remediation that a buyer will inevitably absorb within the first 36 months of ownership.

Current ownership has neutralized this debt entirely through a deliberate, documented program of system renewals executed in 2025 and 2026. The result is a **Zero-CapEx asset**—a property whose depreciation clock has been reset, delivering a maintenance-free infrastructure runway of **15 or more years**.

“The most expensive home is the one that looks affordable—until the first mechanical failure.”

Documented System Renewals

Each system below has been professionally renewed with full documentation, transferable warranties where applicable, and verified performance benchmarks.

System Component	Year	Cost Saved	Strategic Impact
Architectural Roof	2025	\$30,000–\$45,000	Full tear-off and replacement with architectural-grade shingles. 20+ year manufacturer life expectancy. Eliminates the single largest deferred structural liability in a 2002-era home.
Dual HVAC & Heat Pumps	2026	\$18,000–\$28,000	Complete dual-zone climate system replacement. High-efficiency heat pump technology. Full manufacturer warranty reset. Projected utility savings of 15–20% annually vs. original 2002 units.
6-Inch Seamless Gutters	2026	\$6,000–\$10,000	Upgraded from standard 5-inch to oversized 6-inch seamless aluminum. Prevents foundation erosion, fascia deterioration, and long-term drainage liability. Handles 40% greater water volume.
Crawlspace Encapsulation	2026	\$13,000–\$20,000	Full vapor barrier installation and environmental remediation. Moisture levels reduced below 13%. Eliminates biological debt (mold, mildew, wood rot risk) and defends structural integrity for 20+ years.

System Component	Year	Cost Saved	Strategic Impact
Pool Heater	2026	\$8,000–\$15,000	New high-efficiency pool heating system. Enables year-round aquatic lifestyle utility. Zero deferred maintenance on aquatic infrastructure.
TOTAL SAVED		\$120K–\$180K	Consensus Valuation Add: \$150,000+

“Every major mechanical and structural system at 7810 Stonehaven Drive has been professionally renewed in 2025–2026, representing \$120,000–\$180,000 in pre-emptive capital investment. This estate delivers a Zero-Capital-Expenditure ownership experience for the next 15+ years.”

System Profiles: Detailed Specifications

Architectural Roof (2025)

Scope: Complete tear-off of original 2002 roofing system. Full replacement with architectural-grade dimensional shingles.

Coverage: All roof planes, ridgelines, valleys, and flashing. Includes ice-and-water shield at all penetrations and eaves.

Life Expectancy: 20–30 years (manufacturer rated). Full transferable warranty.

Impact: Eliminates the single most costly deferred maintenance item in a 20+ year home. Provides structural assurance for the next generation of ownership.

Dual HVAC and Heat Pump Systems (2026)

Scope: Replacement of both original 2002 HVAC systems with modern, high-efficiency dual-zone heat pump technology.

Efficiency: SEER2 ratings exceeding current federal minimums. Projected 15–20% reduction in annual heating and cooling costs vs. original equipment.

Warranty: Full manufacturer warranty reset on both compressor and air handler units. Transferable to new ownership.

Impact: Eliminates the second most common source of buyer anxiety in aging luxury homes. Provides year-round climate precision across all living zones.

6-Inch Seamless Gutters (2026)

Scope: Complete removal of original 5-inch gutter system. Replacement with oversized 6-inch seamless aluminum gutters and downspouts.

Capacity: Handles approximately 40% greater water volume than standard 5-inch gutters, critical for North Carolina storm patterns.

Impact: Prevents cascading damage: foundation erosion, fascia and soffit rot, landscape washout, and basement/crawlspace moisture intrusion. A silent but essential infrastructure defense.

Crawlspace Encapsulation (2026)

Scope: Full crawlspace remediation including professional-grade vapor barrier installation, moisture control, and environmental sealing.

Performance: Post-encapsulation moisture levels verified below 13%—well within safe thresholds for structural wood framing.

Impact: Eliminates “biological debt”: the compounding risk of mold, mildew, wood rot, and pest intrusion that accelerates in un-encapsulated crawlspaces after 15+ years. Protects structural integrity for 20+ years.

Pool Heater (2026)

Scope: Replacement of original pool heating system with a new high-efficiency unit.

Utility: Enables comfortable pool use from early spring through late fall, extending the annual swim season by 8–10 weeks.

Impact: Zero deferred aquatic infrastructure cost. Immediate year-round lifestyle utility for the resort-style pool and hot tub.

True Cost-of-Ownership Analysis

The following comparison illustrates why the \$2,195,000 listing price—when evaluated through a total-cost-of-ownership lens—represents the most de-risked acquisition in the corridor.

	Typical 2002-Era Estate (Un-Renovated)	7810 Stonehaven Drive (Zero-CapEx)
Listing Price	\$1,850,000	\$2,195,000
Invisible Debt (Years 1–3)	\$120,000–\$180,000	\$0
True All-In Cost	\$1,970,000–\$2,030,000	\$2,195,000
Effective Premium	—	\$165,000–\$225,000
What Premium Buys	—	15+ year maintenance-free runway, non-HOA 0.784-acre rear lot with heritage cabin, Wolf/Sub-Zero culinary suite, Japanese garden, private creek

When adjusted for true cost-of-ownership, the effective premium for the Whitney Estate is \$165,000–\$225,000. For that differential, the buyer acquires: a 1.4-acre non-HOA compound (valued at \$250,000–\$450,000 independently), a Wolf/Sub-Zero culinary suite, heated marble ensuite floors, a Japanese walking garden with private creek, and complete mechanical certainty for 15+ years. The premium does not merely justify itself—it represents an asymmetric value transfer in favor of the buyer.

Comparative Market Context

Comparable	Sale Price	Context
1400 War Admiral Ln	\$1,850,000	Renovated estate with land. Establishes the corridor floor.
1011 Helaina Ct	\$2,732,000	Custom compound on 0.50 acres with pool. Validates \$2M+ pricing.
1008 Maxwell Ct	\$3,473,395	New construction on 0.76 acres. The corridor ceiling.

Compound Asset Inventory

The sale of 7810 Stonehaven Drive includes **two parcels** conveying at closing, comprising the primary residence and a separate non-HOA rear lot with six documented lifestyle improvements.

Parcel Structure (County GIS Verified)

Parcel	Number	Acres	Status
Primary residence	06156102	0.475	Weddington Chase HOA
Rear lot	06156006R	0.784	Non-HOA (Town of Marvin zoning)

The rear lot (06156006R) is a **remainder parcel** from the original pre-subdivision tract. The “R” suffix denotes land that predates the Weddington Chase plat and was never absorbed into the HOA. Zoning authority rests with the Town of Marvin. Both parcels share a single deed reference: Book 8351, Page 858, recorded December 20, 2021. Combined acreage: **1.26 acres** (0.475 + 0.784).

Rear Lot Improvements

Heritage Studio (150 sq ft) — A rustic cabin constructed from painstakingly reclaimed wood, dismantled from its original location and reassembled on the rear lot with live electrical service. The structure exhibits authentic farmhouse character with weathered timber framing and hand-finished surfaces. Potential uses include: private detached office, maker’s workshop, or Airbnb micro-cabin. No HOA approval required for any modification or use.

Japanese Walking Garden — A curated garden with mature maples, stone pathways, and a hand-laid bridge spanning a private creek. Designed as the primary biophilic amenity and the estate’s “Hero Asset” for marketing purposes.

Private Creek & Bridge — A natural creek running through the rear lot with a pedestrian bridge providing access across the garden. Year-round water feature.

Functional Small Farm — Chicken coop and garden infrastructure for sustainable living. Permitted without restriction on the non-HOA lot.

Walking Paths — Maintained pathways connecting the garden, creek, cabin, and farm areas into a cohesive landscape experience.

“The rear lot is not open land awaiting a vision. It is a finished, electrified, curated estate-within-an-estate—the physical proof of what total freedom produces when wielded with intention.”

“This is not a negotiation about price. It is a conversation about what a buyer cannot replicate, cannot assemble, and cannot find elsewhere in this corridor at any price.”
